

FARMER INFECTIOUS LARYNGOTRACHEITIS (ILT) DISEASE ADVISORY Waterloo County

October 24, 2017

On behalf of the four feather boards, the Feather Board Command Centre (FBCC) is issuing an ILT Disease advisory to all commercial poultry farmers and small flock growers in a mapped area including the northeastern part of Waterloo County.

FBCC has been alerted by the Ontario Ministry of Agriculture, Food and Rural Affairs (OMAFRA) that 10 week old birds from a commercial layer pullet flock in the northeastern part of Waterloo County have tested positive for Infectious Laryngotracheitis (ILT) after showing upper respiratory signs and some increased mortality. The flock has previously been vaccinated. Investigation as to the source of the virus is underway. OMAFRA staff are collaborating with the veterinarian to ensure proper bio-containment and disease control measures are in place.

Please reinforce your biosecurity protocols including monitoring the movement of birds, people and equipment onto and off of the farm in the interest of flock health.

Should you suspect any signs of health concerns in your flock, please contact your veterinarian as well as your Board. ILT is a serious contagious disease caused by a respiratory virus primarily in laying hens and chickens. Signs to look out for include: increased mortality, noisy breathing, head-shaking, off feed, decreased egg production, inactivity, ruffled feathers and conjunctivitis.

Please advise any visitors to your premises of your biosecurity protocols because of this situation and keep a logbook of movement in relation to your farm. Minimize visits to other poultry production sites, avoid exchanging equipment with other poultry production sites or ensure that it is washed and disinfected. Ensure all personnel in contact with birds wear boots, protective suits, head coverings and gloves/handwashing. Ensure adequate control of vermin and wild birds.

Further biosecurity information for small flock growers is available at <http://www.inspection.gc.ca/animals/terrestrial-animals/diseases/bird-health-basics/eng/1323643634523/1323644740109>.

We anticipate this advisory to remain in place until late November. A stand down advisory will be issued at that time. Any updates will be provided through www.fbcc.ca
